Re: Price Factory Visits to Winnipeg and Atlanta

Dear Vin:

Boston
Baltimore
Buffalo
Calgary
Chicago
Houston
Los Angeles
Mumbai
New York
Phoenix
St. Louis
San Francisco
Shanghai
Toronto
Vancouver
Victoria
Washington DC

As a follow-up to our recent trips to Price locations, I wanted to let you know that I sincerely appreciate the commitment to engineering design and construction support that both Buckley Associates and Price provides to HVAC design professionals. We take pride in designing systems that support our clients' enterprises and the optimization of occupant health, safety and comfort- while minimizing energy and water usage. The support provided by Buckley and Price is critical in allowing our engineers and architects to design high performance building systems.

The new Price Technology Center in Atlanta that I visited in November, and the lab in Winnipeg where we tested the 200 TS chilled beam mock-up in June, are some of the most impressive facilities in our industry. We appreciate that these facilities have been made available to our design team to explore project-specific design options, or to simply gain a better understanding of a technology. More importantly, the intelligent and engaging people we worked with during our visits who are operating and managing these facilities are the key to providing us with the technical support we need.

Price's constant delivery of new and innovative technology enables us to push the envelope in design with the confidence that we have support from the manufacturer and the local representative during the design, commissioning and operational phases of the implementation of a system.

As a dedicated ASHRAE member, I also appreciate Price's commitment to the industry. I have seen first-hand the commitment of their technical leaders and how they are deeply involved with ASHRAE and AHRI, developing new standards and helping to introduce innovative design techniques and concepts to our industry.

Please pass along my appreciation to all of the Price and Buckley staff that allows our teams to design innovative solutions for our clients and their high performance building projects.

Sincerely,

John Swift, Jr., PE, LEED, CEM
